

Jessica's Rise to Fame

As a child, Jessica Earp was fascinated with all-things nature, and had an encyclopaedic knowledge on every type of plant, insect and animal. Jessica was a passionate scientist who could often be found experimenting with home-mace botanical perfumes or concocting remedy potions in her back garden. Jessica was also a keen artist and potter. During Jessica's teenage years, with the entire planet under threat from global warming, deforestation and pollution, the world's bee population began to dwindle which had devastating effects on the world's food supply chain. Jessica thought she may have a solution! After 2 years of relentless testing and experimenting in her parents back garden, at the age of 19, Jessica pitched her idea to David Attenborough. Jessica had invented the world's only '100% Natural, Wildlife - Friendly Weed Killer', which could be distributed and used the world-over without causing harm to any wildlife at all. Natural products are cheaper to produce than chemical ones, and so therefore are more affordable and the profits from sales of her Weed Killer not only made Jessica one of the top 20 richest females in the world, but also one of the youngest.

At the age of 21, Jessica invented a 'Bee - Solution' called Mighty Bee, for Bee-Keepers to feed to their colonies and prevent them getting mites. This in turn had a massive positive effect on the agriculture of Britain and bought

farming back from the brink of extinction. Jessica Earp is a National Treasure and has helped save the worlds food chain.

Jessica's twin sister Georgia was also passionate about animals as a child and now works at Twycross Zoo with a claim to fame of her own. Jessica is still inventing lotions and potions in her back garden, alongside her ginger and white Akita called Chip. Who knows what she will invent next??
